

ExpressJS Templating, Form Data

GitHub-readable preview of the presentation. Download the matching .pptx for the editable PowerPoint.

1. Syllabus tasks

- Write a program using a templating engine.
- Write a program to work with form data.

2. Workflow

ExpressJS Templating, Form Data

Workflow: input → processing → data/state → output

3.1. Code pathway — app.js

```
1 const express = require('express');
2 const app = express();
3 const PORT = 3002;
4
5 app.set('view engine', 'ejs'); // Tell Express to use EJS templates.
6 app.use(express.urlencoded({ extended: true })); // Read form data.
7
8 app.get('/', (req, res) => {
9   res.render('index', { title: 'FSD2 Form', message: '' });
10 });
```

3.2. Code pathway — app.js

```
11
12 app.post('/submit', (req, res) => {
13 // Values are received from the HTML form.
14 const name = req.body.name || 'Guest';
15 const course = req.body.course || 'Not selected';
16 res.render('index', { title: 'Form Result', message: `Hello ${name}. Course: ${course}` });
17 });
18
19 app.listen(PORT, () => console.log(`Server: http://localhost:${PORT}`));
```

4. Runtime walkthrough

Runtime walkthrough — ExpressJS Templating, Form Data

Runtime: start → enter → execute → observe

5. Run and observe

- Start the server / Vite app or open the MongoDB shell as described in the experiment README.
- Enter the sample input or call the required route.
- Watch the terminal for logs and errors.
- Verify the browser, API response, or database result.

6. Viva questions

- What is the purpose of this experiment?
- Which input is required?
- Which line or command performs the main operation?
- What output should you observe?
- What happens when the input changes?
