FSD2 LAB • EXPERIMENT 02

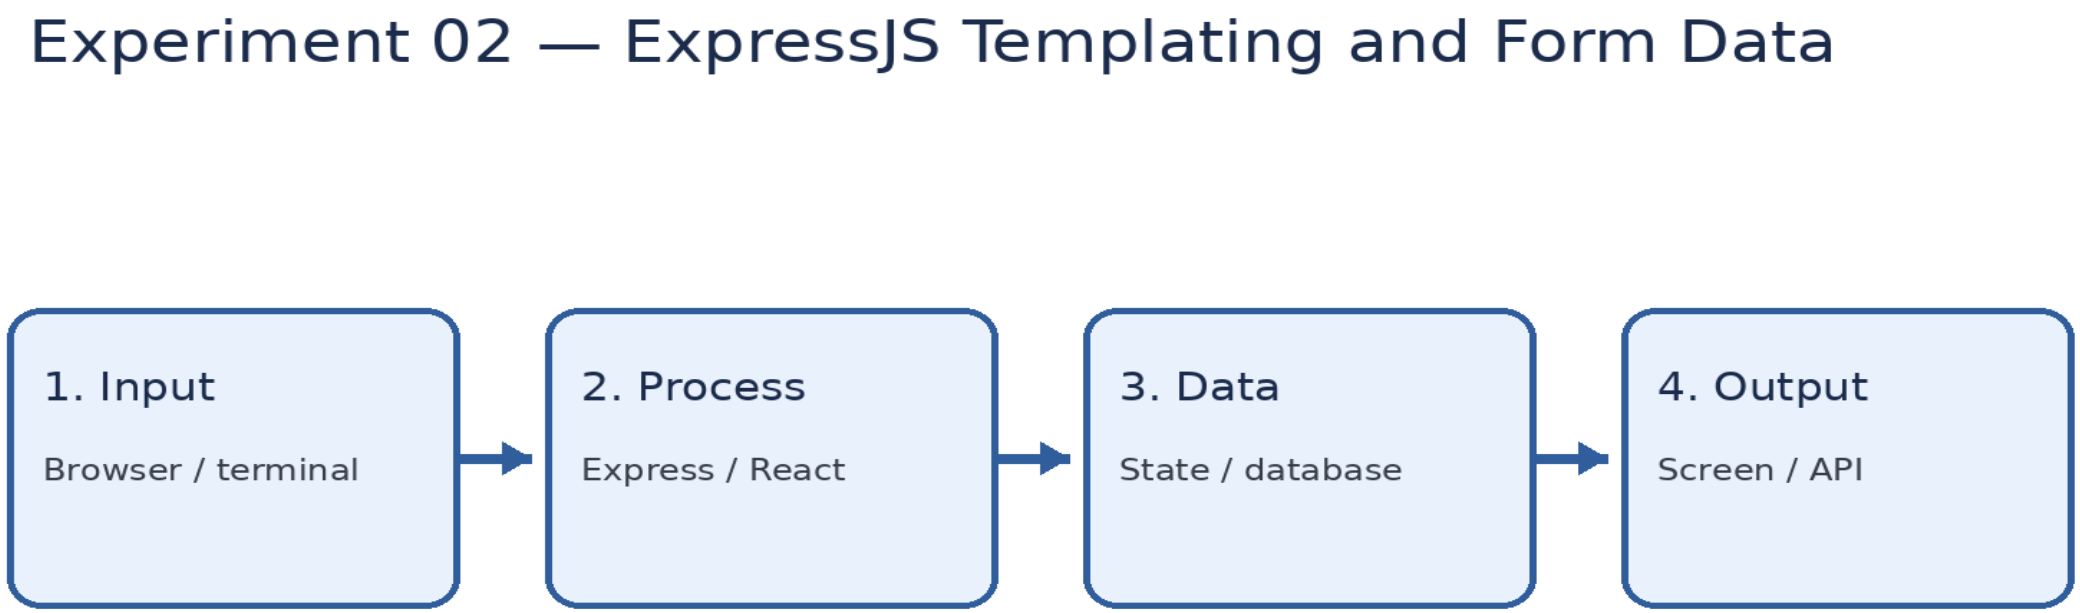

Experiment 02 — ExpressJS Templating and Form Data

GitHub-readable preview of the presentation. Download the matching .pptx for the editable PowerPoint.

1. Syllabus tasks

- `app.js`: configures EJS, reads form data using `express.urlencoded()`, defines `GET /` and `POST /submit`, and calls `res.render()`.
- `views/index.ejs`: displays the form and server-provided title/message.

2. Workflow

Workflow: input → processing → data/state → output

3.1. Code pathway — app.js

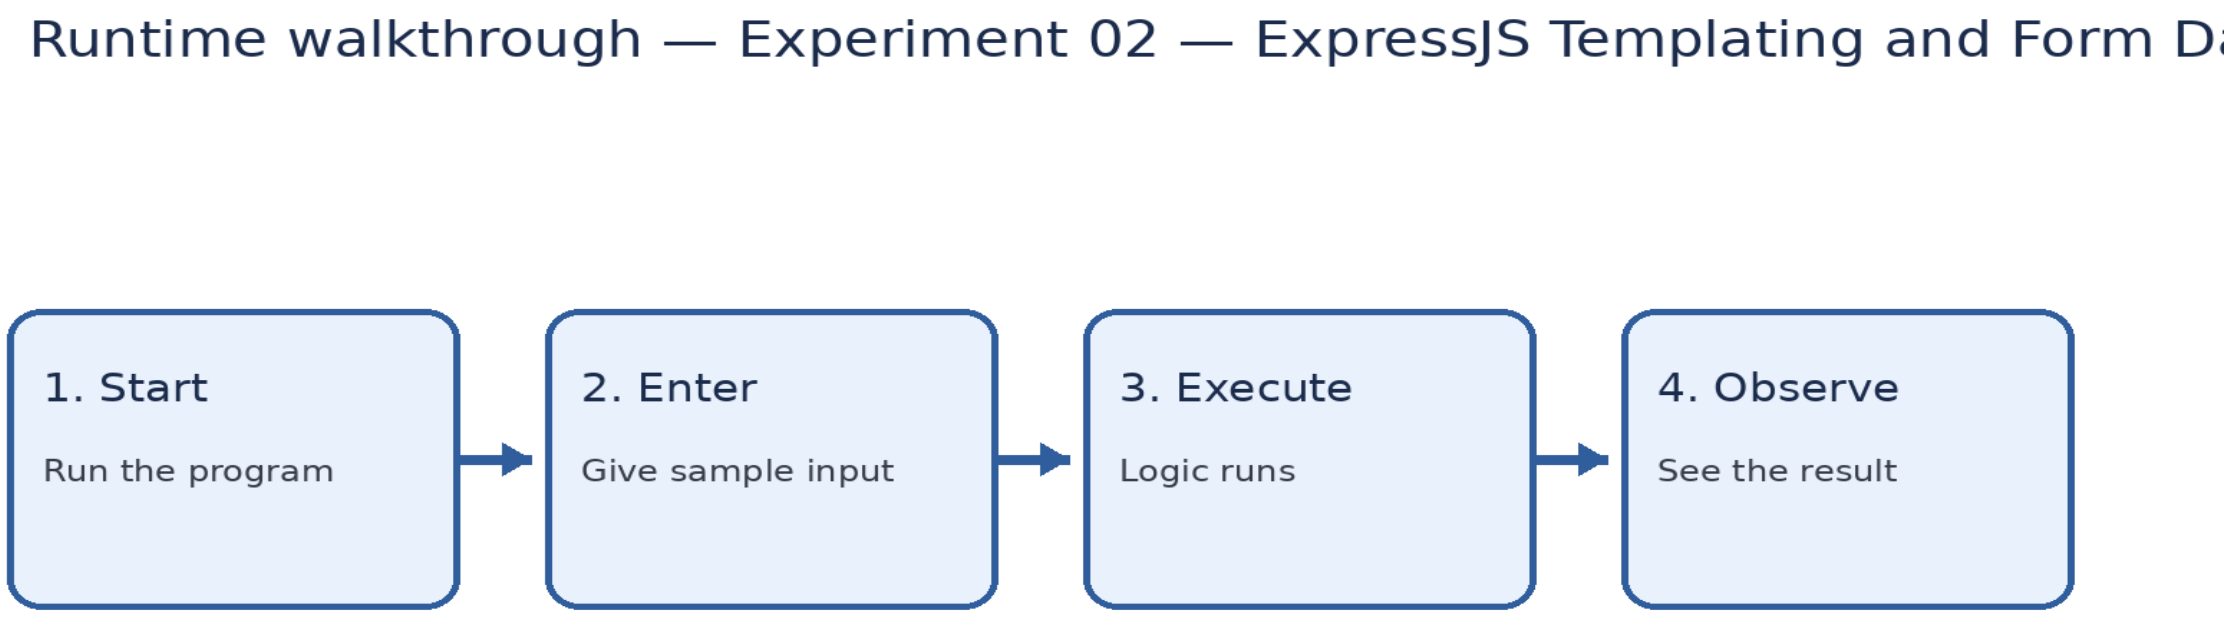

```
/**
 * Experiment 02: ExpressJS Templating and Form Data
 *
 * What it demonstrates:
 * - EJS templating
 * - HTML form handling
 * - GET and POST routes
 * - Passing data from Express to an EJS view
 */

```

3.2. Code pathway — app.js

```
11 const express = require('express');
12
13 const app = express();
14 const PORT = 3002;
15
16 // ------------------------------------------------------------
17 // Configuration and middleware
18 // ------------------------------------------------------------
19
20 app.set('view engine', 'ejs');
```

4. Runtime walkthrough

Runtime: start → enter → execute → observe

5. Run and observe

- Start the server / Vite app or open the MongoDB shell as described in the experiment README.
- Enter the sample input or call the required route.
- Watch the terminal for logs and errors.
- Verify the browser, API response, or database result.

6. Viva questions

- What is the purpose of this experiment?
- Which input is required?
- Which line or command performs the main operation?
- What output should you observe?
- What happens when the input changes?
